

Broadway Theatre Barking

Rooff are pleased to announce the successful completion of the Broadway Theatre project in Barking.

The Original Civic Hall was designed by Herbert Jackson and Reginald Edmonds in 1936 and was completed in 1960, as part of the Barking Town Hall complex.

The building has been completely refurbished and extended to provide a new auditorium, a contemporary entrance foyer extension and performing arts teaching accommodation.

The new scheme incorporates a flexible performance space formed by the insertion of a new stage, hanging balconies & retractable bleacher seating.

Motorised curtains outside the balconies allow for the opening up of the whole hall for larger events.

The client was the London Borough of Barking & Dagenham, with the performing arts department of Barking College occupying the basement teaching and training facilities.

The new arts and education complex forms part of the regeneration strategy for Barking Town Centre as well as creating a unique performance venue for the Borough of Barking and Dagenham.
